

# GOVERNMENT SOLUTIONS

PTP helps organizations deal with outdated technology and inefficient processes and are experts at reengineering applications that span multiple systems, software languages and platforms. PTP offers solutions that allow for the seamless migration of applications across architectural platforms and provide end-to-end custom software application development from initial use case analysis through post-implementation support.

## “WE KNOW GOVERNMENT”

PTP has significant experience in systems integration and application development building browser-based applications for the largest government clients. We can leverage that experience and expertise to replace or build new enterprise applications, extend or add customer-facing websites or to develop mobile websites or mobile applications to deliver world-class customer service solutions.

## SYSTEMS INTEGRATION AND APPLICATION DEVELOPMENT

We know Government Technology. PTP partners with its clients to implement proven, leading edge technologies and solutions into complex technical environments to achieve your business objectives. Our management, technical, and business leadership collaborate with your experts to tailor solutions to your unique needs and deliver the results necessary to achieve your Information Technology visions and goals.

PTP’s experience allows us to be flexible when designing your solutions. We work in partnership with our clients to design, adapt, and implement open solutions and technologies into your complex technical environments to solve your business problems. We use our management, technical, and business expertise and partner with your experts to deliver the results necessary to achieve your goals and objectives.

PTP offers the following full range of integration and application development services directly to government agencies. Each will be tailored to meet your unique needs:

- System Integration
- Requirements Determination
- Service Oriented Architecture
- Conversion and Migration
- System & Acceptance Testing
- Accessibility & Security Audits
- Application Development
- Project Management
- Help Desk
- Technical Architecture
- Release Management

PTP provides results-driven system integration services and proven business and technical expertise to meet the most demanding customer needs for both custom development and packaged solutions, and our team of consultants has consistently delivered on-time and on-budget, exceeding our client’s expectations.

Our expert-level project management consultants use best practices (e.g., PMI, PMBOK, Agile) to partner with you to achieve your project objectives on your mission-critical IT initiatives, and our consultants have deep experience in custom application development.

## ENTERPRISE APPLICATIONS

We know Government Enterprise Applications. Enterprise Applications are defined as solutions that integrate multiple facets of an organization's business through the interchange of information from various business process areas and related databases. These solutions enable organizations to retrieve and disseminate mission-critical data and functionality throughout the organization.

PTP has extensive experience in Enterprise Applications. Our consultants have worked on some of the largest and most complex Enterprise Applications in the United States. PTP's expert level business and IT consultants have successfully partnered with government agencies to implement Enterprise Applications that have significantly increased revenue and operational efficiencies.

## WEB & MOBILE

We know Web & Mobile. Innovative organizations are becoming mobile organizations. They connect with mobile citizens and taxpayers, deliver more convenient and relevant services and improve customer service. PTP enables organizations to become mobile organizations to:

- Better service citizens and taxpayers and increase productivity using the new business models and insights you can only get from mobile interactions
- Provide users with contextually relevant experiences by delivering engaging applications or websites that are created with simplified multichannel solutions
- Provide a consistent brand experience across all channels by connecting mobile applications or mobile websites to systems of record for continuous, trusted transactions.

## SECURITY

We know Security. PTP's proven processes and methodologies allow us to detect a wide variety of application vulnerabilities. Automated tools are only a small part of what we do. PTP Security Specialists carefully study how the application works and identify risks and vulnerabilities that cannot be detected by automated scanners. A thorough examination of how the developer built the application along with in-depth experience in application development and hacking techniques allows us to apply a real-world scenario experience that would be common in real attacks by cyber criminals.

## ACCESSIBILITY

We know Accessibility. PTP is committed to helping organizations achieve end-to-end accessibility in their websites so that people with disabilities, technology limitations and reading restrictions can use the web. Our web accessibility consulting services include audits, training and web development/remediation services.

Audits are conducted against a set of standards such as Section 508 or the Web Content Accessibility Guidelines 2.0, but PTP can also test and report against a combination of these and combine criteria where they overlap. We can also include specific organization or federal standards where required.

## APPLICATION MANAGEMENT

We know Government Systems. Maintenance and Support costs represent the majority of system expenses. At the same time, it is critical to adapt to the ever-changing business environment. At PTP, we recognize the unique challenges of today's government and offer our application management services, backed by a proven track record in maintaining, enhancing, and supporting complex systems.

PTP offers the following full range of application management services. Each can be tailored to meet your unique needs:

- Maintenance and Support
- Enhancements and Modifications

### Maintenance and Support

PTP is a proven provider of maintenance and support services to maximize the value received from our client's application portfolio at the lowest possible cost.

### Enhancements and Modifications

Continuing to enhance and modify your existing applications to match the ever changing business environment is critical to maximizing the value received from your IT investments. PTP's proven methodology and best practices are tailored to quickly understand the application environment and efficiently implement identified enhancements.
